Have the best of both worlds...

The power and flexibility of web based software that you can host yourself or on the cloud.

Most recruitment software packages are either web based or installed. Web based software offers businesses a whole new level of flexibility but it means sacrificing the security of keeping all the data on your network. It involves a huge amount of trust between you, your software provider and their team.

Vacancy Lab is different: It is built using the latest web based technologies, but you can choose how to host it:

* Want to install it in the cloud? **Certainly!**

* Want to install it on a laptop or machine in your office? **Sure Thing!**

* Want to install it on a machine in your office but still have it accessible over the web? **No Problem!**

*minimum requirements apply

Vacancy Lab
recruitment software

Intuitive…

Power doesn't need to be complicated.

With Vacancy Lab, your data is front and centre. All the controls, features and functions take up a minimal amount of screen space thanks to our intuitive right click menu:

- Opening Records
- Sending a CV
- Emailing someone
- Creating a mail merge
- Adding new records

- Adding a new journal
- Running searches
- Sending Text Messages
- Merging record
- Archiving records

To make it even simpler, the right click menu is contextual. Only those options relevant to the section you are in will be displayed.

Functionality...

All the features you expect in an expensive recruitment CRM

- Full CV Processing
- Job Board Integration
- Vacancy Management
- Ad-Hoc Searching
- Website Publishing

- Task Automation
